

# Incident & Event Management

Improve EHS performance by tracking and analyzing incidents and other events

## SOLUTION OVERVIEW

On average, more than 500 workers are injured in the U.S. every hour of the workweek costing companies billions in lost time, worker's compensation, property damage, legal fees, and penalties. Additionally, reported incidents represent only a small percentage of total incidents, making it difficult for organizations to get an accurate picture of their overall risk. To safeguard employees, reduce environmental impacts, and minimize loss, EHS leaders need to understand incidents and near misses in depth, in detail, and in context.

**Dakota Scout** simplifies tracking of injuries, environmental incidents, motor vehicle accidents, and other events and helps to proactively improve EHS performance and regulatory compliance. Using interactive dashboards, EHS leaders can analyze data to identify trends and correlations across their locations. Site leaders can easily satisfy OSHA Recordkeeping requirements by generating 300 and 300a reports as well as FROI reports.

## Scout

- ✓ Capture incident, near misses, and other events from any device
- ✓ Collaborate on Root Cause Analysis (RCA) and investigations
- ✓ Analyze trends using filters and interactive dashboards
- ✓ Initiate and track Corrective Actions to closure
- ✓ Generate OSHA 300, 300A, 301 and other types of reports

# Why Dakota?

*"Scout is a one-stop-shop that allows our global workforce to report incidents centrally while simplifying data analysis and month-end reporting."*

## Report incidents from anywhere

To promote a culture of safety, incident reporting needs to be simple and include a feedback loop. Dakota Scout allows any employee, even those without a user account, to report incidents from any device. Email alerts provide a record of each report and help to keep EHS leaders informed.

## Simplify analysis and reporting

Scout transforms incident management from reactive to proactive. Its interactive dashboards provide an elegantly simple method for analyzing trends, evaluating hazards, and pinpointing operational risks. EHS leaders can share insights with their teams and output data for external reporting.

## Close the loop on Corrective Actions

Using journals, attachments, and alerts, Scout helps to maintain accountability and transparency at all levels of the organization. It allows users to collaborate on investigations and track Corrective Actions to closure providing a holistic view of EHS compliance and performance.

## Platform Features

### User Engagement

- ✓ Easy access via Single sign-on (SSO)
- ✓ In-product Guides and contextual Help menus
- ✓ Live Chat, Web Training, and User Events

### Enhanced Collaboration

- ✓ Multi-language translation of menus and forms
- ✓ Centralized, secure repository for documents
- ✓ Time-stamped event log of all user actions
- ✓ User-defined email notifications and reminders

### Flexible & Accessible

- ✓ Configurable locations, forms, dashboards, and alerts
- ✓ Permission-based access by User Profile & Personality
- ✓ Device-aware, mobile-optimized user interface

### Business Intelligence

- ✓ System and user-defined data views & dashboards
- ✓ Standard and configurable outputs & reports
- ✓ Interactive data exploration using *Parametric Filtering™*
- ✓ Configurable Home Screen with one-click data access
