

EHS Business Intelligence & Analytics

Translate your EHS data into actionable indicators of operational risk

SOLUTION OVERVIEW

EHS Professionals depend on data to make informed decisions, but nearly 70%* say they lack quality data and analytical tools. **Dakota Insights** is a flexible Business Intelligence (BI) platform for data-driven EHS leaders. It helps users unlock the analytical power of their EHS data and share actionable intelligence across their organization.

Smart. Flexible. Shareable. Insights automatically combines data from Dakota Software's **ProActivity Suite**® into a centralized platform for a holistic view of EHS risk. Coupled with Dakota's content-driven compliance management products, it provides true end-to-end EHS management while slashing data aggregation and reporting time.

- ✓ Centralize EHS data and simplify analysis across locations
- ✓ Measure EHS performance using established and advanced metrics
- ✓ Customize, create, and share dynamic dashboards and KPIs
- ✓ Reduce time spent compiling data and assembling EHS reports
- ✓ Deliver actionable intelligence to internal and external stakeholders

*Verdantix - EHS Green Quadrant 2019

Why Dakota?

"We used to spend a lot of time preparing and assembling various EHS reports. With Dakota Insights, we save about a week of man hours every month."

Built-in EHS expertise with every click

Don't try to reinvent the wheel. Dakota Insights starts users with pre-made visualizations of established EHS performance indicators, such as DART and TRIR. It also includes advanced indicators for measuring regulatory preparedness and compliance status across locations.

Roll-up reporting, drill-down analysis

Dakota Insights simplifies analytics across all levels of the organization. Management-level data can be filtered by facility, region, and business segments and compared across date ranges. Dashboards and Key Performance Indicators (KPIs) provide EHS performance trends and help to pinpoint areas of operational risk.

Save time with customizable analytics

Stop compiling data in disconnected spreadsheets. Dakota Insights automatically combines cross-product data from the **ProActivity Suite**, saving users countless hours and providing centralized access to their EHS data. The Analytics Builder allows users to customize, create, and share their own dynamic dashboards.

Easily share your EHS intelligence

Embed EHS into your company culture and prompt informed discussions that drive action. Insights' automated reports can be delivered via email on set schedules or triggered by threshold changes. Dashboard reports can be embedded anywhere, facilitating effective data presentation to EHS and non-EHS professionals alike.
